AAQIB SHAIKH

Aspiring AI ML Engineer

Karachi, Pakistan | shaikhaqib498@gmail.com | linkedin.com/in/aaqib-shaikh-3648a0137 | 923180343006

PROFESSIONAL SUMMARY

Final-year Computer Science student (BS, Iqra University, 2026) who builds machine learning and computer vision projects in Python, including a **YOLO-based car detection system** and an **anomaly detection** tool. Strong foundation in data structures, algorithm design and data preprocessing, with a hands-on, project-first approach to learning AI. Seeking an AI/ML internship to apply these skills on real data, learn production practices and grow into an applied AI engineer

Technical Skills

Programming: Python (primary), Java, C++, C

Machine Learning: Supervised learning, classification, data preprocessing, feature engineering, model evaluation (precision, recall, mAP), pattern and anomaly detection

Deep Learning: Convolutional Neural Networks (CNNs), object detection with YOLO, transfer learning (learning)
Computer Vision: OpenCV, image and video processing, dataset annotation, data augmentation
Libraries: NumPy, Pandas, Scikit-learn, Matplotlib, Ultralytics YOLO, PyTorch (basics)
Tools: Git and GitHub, Jupyter Notebook, Google Colab, VS Code
CS Foundations: Data structures and algorithms, sorting and searching, complexity analysis, problem decomposition

PROJECTS

Real-Time Car Detection using YOLO
Built an end-to-end object detection system that identifies and localizes cars in images and live video streams.

- Trained on a custom labeled dataset of **[images**, applying augmentation (flip, brightness, scale) to improve generalization.
- Evaluated the model with confusion matrices and PR curves, and tuned hyperparameters to reduce false positives.
- Deployed a demo through a Streamlit/Flask web interface for easy testing.

Smart Waste Management System

Data-driven systems design

- Designed a system to monitor and classify waste levels from sensor-style data inputs.
- Explored how that data could feed an automated decision-making pipeline for smarter collection.

Sorting and Searching Algorithm Simulators

- Using C++, Java Built simulators of core sorting and searching algorithms to visualize behavior and compare complexity.
- Strengthened the algorithmic foundation needed for model design and optimization.

Soft Skills

Problem solving | Attention to detail | Clear communication | Time management | Teamwork | Ability to work independently in a remote setup

Internship Objective

Seeking an AI/ML internship where I can work on real datasets, contribute to computer vision or machine learning models, and learn production-level practices from experienced engineers. I bring strong Python skills, solid algorithm fundamentals, and the drive to learn fast.

Currently Learning

- Deep learning and CNNs with PyTorch
- Model deployment basics: Streamlit or Flask demo

EDUCATION

BS Computer Science — Iqra University, Karachi
2022 – 2026

Additional Information

- Languages: English
- Strengths: Punctual, hardworking, highly focused, strong multitasking ability
- Interests: Artificial Intelligence, Machine Learning, Data Science, Software Testing
